

What is "JIPYEONG"?

Dahamsa International – Sri Lanka

What is "JIPYEONG" fertilizer?

- A sulfur fertilizer that has undergone fermentation and detoxification, with the following effects:
 - Improves the growth and development of crops
 - Treats and prevents disease
 - Prevents the spread of epidemics
 - Rapidly reduces the amount of pesticide used, cutting costs (economic benefit)
 - Neutralises soil pollution and acidification, enabling safe food production (environmental benefit)
 - Used as a pesticide substitute and promotes the absorption of various minerals, achieving high quality and high yield (technical benefit)
- The manufacturing process includes:
 - Detoxification technology
 - Fermentation technology
 - Particle grinding technology
 - Addition of essential nutrients

"JIPYEONG" composition

Nitrogen (NO ₃) 18%	K ₂ O 1%	B ₂ O ₃ 0.05%
Zinc (Zn) 0.05%	SO ₄ 2%	TE (minerals) —

Recommendations for use

- Dilution ratio: 1:250 or 1:1000 (JIPYEONG : water)
- 1 litre (1 L) can be used on 1 acre (1 Ac) of land
- Dilute 64 ml or 30 ml in 16 litres of water (sprayer tank)
- 1 litre prepares 15–16 sprayer tanks → sufficient for 1 acre

Application interval

- Initial stage: four consecutive applications at 14-day intervals (4 times over 2 months)
- Thereafter: continue applying at intervals of 2 months or more, depending on crop yield and soil condition

How to use "JIPYEONG"

- Shake the container well before use
- Mix thoroughly with water in the sprayer tank
- A 16-litre tank of diluted solution is sufficient for about 10–12 plots (small fields)
- Best times to spray: 06:00–09:00 and 15:00–18:00
- Do not use during frost, heavy rain or strong sunlight

Characteristics of "JIPYEONG"

- High fertilizer efficiency
- A small amount is sufficient
- Free of heavy metals and toxic compounds
- Mixes well with water
- Fine particles, easily absorbed
- Can be used even during drought
- Simple to handle
- Minimal waste
- Three hours without rain is enough for full absorption
- Can be used at any time

Advantages of using "JIPYEONG"

- Reduces existing fertilizer costs by 30–40%
- Increases existing yield by more than 30%
- Prevents pests and diseases
- Extends the crop harvest period
- Improves harvest quality
- Improves soil condition
- Strengthens the root system
- Boosts crop vitality

Use "JIPYEONG" for success worldwide. Thank you.
